human performance optimization the science and ethics of enhancing human capabilities explores current and emerging strategies for enhancing individual and team performance especially in high stakes stressful settings such as the military law enforcement firefighting or competitive corporate settings taking a cognitive neuroscience perspective scientifically grounded approaches to optimizing human performance are explored in depth

the topic of human performance has grown dramatically in recent years and draws on a range of academic disciplines including physiology biomechanics psychology and nutrition this book presents recent research in the field that provides a bridge between scientific knowledge and the practitioner in human performance this book covers topics such as the efficacy of exercise training to enhance human performance the cognitive impact of performance tasks nutritional interventions that influence performance predicting human performance from anthropometric variables and examining the impact of specific physiological and environmental factors that influence the performance of daily tasks

conklin's book is an interesting and informal discussion with the reader about the 5 principles of human performance principle by principle chapter by chapter these 5 theories about how humans perform in organizations are principles the building blocks of human performance through which we have established a new way to think about safety and reliability in our worlds and changing the way we think about work is a vital step towards improvement work never stops and work is never normal this idea would scare a mere mortal manager but an enlightened leader knows the power of continuous learning and improvement work is constantly in motion therefore learning must continue work is never the same therefore we never really know how work is being done if we don't know how we perform work how will we know how we can improve the 5 principles of human performance are in a sense a repository of the central values of human performance keeping these principles at the core of our thinking training and practices will allow the basic building blocks of this philosophy to help organizational programs reduce the normal philosophical drift that is present and predictable in all safety programs having these espoused principles keeps us all honest and keeps our human performance effort on track and successful

textbook analysing behavioural sciences developments in the field of job classification and forecasting of work performance examines the issues associated with human task taxonomy studies methodological considerations and evaluation techniques of classification systems describes new approaches to performance appraisal and attainment appraisal graphs and tables

the development of technologies to modify natural human physical and cognitive performance is one of increasing interest and concern especially among military services that may be called on to defeat foreign powers with enhanced warfighter capabilities

human performance modification hpm is a general term that can encompass actions ranging from the use of natural materials such as caffeine or khat as a stimulant to the application of nanotechnology as a drug delivery mechanism or in an invasive brain implant although the literature on hpm typically addresses methods that enhance performance another possible focus is methods that degrade performance or negatively affect a military force's ability to fight advances in medicine biology electronics and computation have enabled an increasingly sophisticated ability to modify the human body and such innovations will undoubtedly be adopted by military forces with potential consequences for both sides of the battle lines although some innovations may be developed for purely military applications they are increasingly unlikely to remain exclusively in that sphere because of the globalization and internationalization of the commercial research base based on its review of the literature the presentations it received and on its own expertise the committee on assessing foreign technology development in human performance modification chose to focus on three general areas of hpm human cognitive modification as a computational problem human performance modification as a biological problem and human performance modification as a function of the brain computer interface human performance modification review of worldwide research with a view to the future summarizes these findings
